

Tanzania

Kilimanjaro Plantation AA

Location
Kilimanjaro, Tanzania

Altitude
1,050-1,400 meters

Varieties
KP423, Baitan, N39

Process
Washed

Drying
Sun-dried on raised beds

Harvest
August-December

Export
October-February

The Kilimanjaro Plantation (KPL) was started in 200 in the shadow of Mount Kilimanjaro. Five years and almost a million new trees later, the plantation was up and operational. An interconnected drip-line irrigation system feeds each of the plantation's trees, ensuring an equal and controllable water flow. KPL's centralized wet mill replaced eight decentralized processing plants and allows for consistent high-quality preparation while reducing wastewater generated by the operation. The plantation staff takes ecological concerns seriously and has set standards that meet UTZ guidelines, as well as a consistent and comprehensive review policy.
